

Natural Language Processing Assignment

As explained in the previous video,

1) Create Flirt Prediction Model

a) Identity the problem statement

b) Research Methodology (Combinations of models like Counter Vector with Classification algorithms, IT-IDF Vector with Classification algorithms)

c) Final Model

2) Created Flirt model should be checked with WhatsApp chat each row

3) Talkative, Less Talkative

4) Most Active Day, Most Active Time

5) Media count sent by each person

6) Missed call- all

(You can refer previous video of Result.)

Submit as a Ipython Notebook(No Need to implement in web development as of now)
